BIG O NOTATION

TIME and space complexity of algorithms

Big O - in mathematics

$O(n)$

Mathematical notation that describes the limiting behavior of a function when the argument tends towards a particular value or infinity.

Paul Bachamann, Edmund Landau (and others)

Bachamann-Landau notation or asymptotic notation

Big O - in computer science

...that's what i like

$O(n)$

$O(1)$

$O(n^2)$

Used to **classify algorithms** according to how their **run time** or **space** requirements grow as the **input** size grows

Classify algorithm - how long (upper bound = worst case)

Time - CPU (ms, μs, ns) computation time

Space - RAM (memory) size

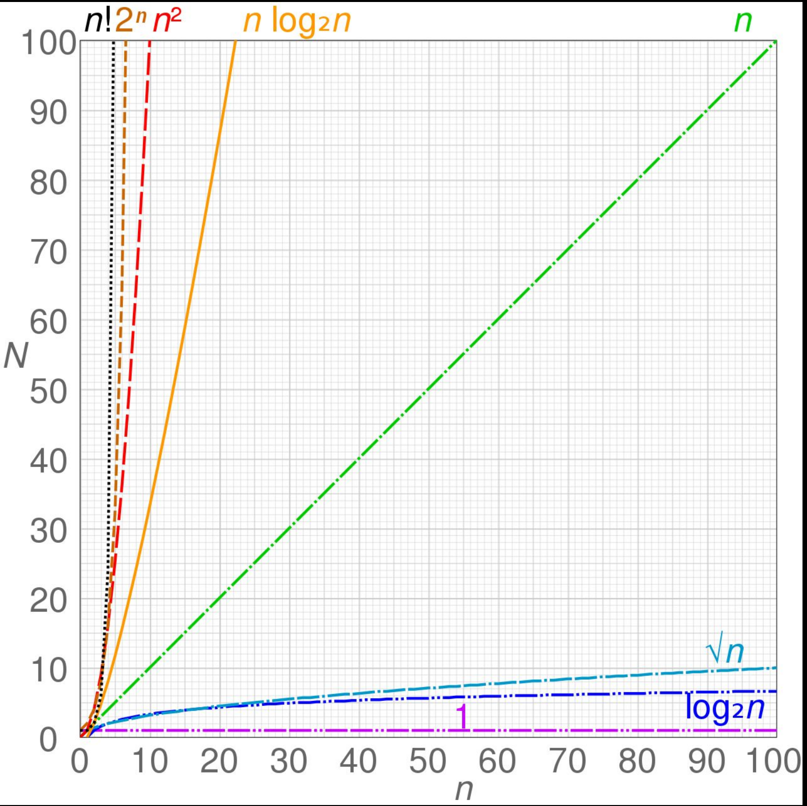
Input *(n)* - data (variables) to process

O - order of the function

Time consumption

uuuh... a picture :)

Big - O graph



and little insignificant table

	constant	logarithmic	linear	N-log-N	quadratic	cubic	exponential
n	O(1)	O(log n)	O(n)	O(n log n)	O(n^2)	O(n^3)	O(2^n)
1	1	1	1	1	1	1	2
2	1	1	2	2	4	8	4
4	1	2	4	8	16	64	16
8	1	3	8	24	64	512	256
16	1	4	16	64	256	4,096	65536
32	1	5	32	160	1,024	32,768	4,294,967,296
64	1	6	64	384	4,069	262,144	1.84×10^{19}

Constant

O(1)

some code, ...finally!

```
void constant(Variable n) {
  statement;
}
```

```
int firstNumber(int[] numbers) {
  return numbers[0];
}
```

Linear

O(n)

straight ahead sailor!

```
void linear(Variable[] n) {
  for (int i = 0; i < n.lenght; i++) {
    statement;
  }
}
```

Quadratic

$O(n^2)$

...some curves at last

```
void quadratic(Variable[] n) {
  for (int i = 0; i < n.lenght; i++) {
    for (int j = 0; i < n.lenght; j++) {
      statement;
    }
  }
}
```

Worst case

n -> infinity

...and beyond...

$$f(n) = a*n^2 + b*n + c$$

$$f(n) = n/a$$

Other bounds

Ω, Θ, O

"I have no strong feelings one way or the other."

Ω lower bound - BEST CASE

Θ average

O upper bound - WORST CASE
